IR² Flame Detector

(Dual Infra-red)
High immunity to false sources
(for indoor areas)

IR³ Flame Detector

(Triple Infra-red)
Excellent immunity to false sources
(for indoor or outdoor areas)

UV / IR² Flame Detector

(Ultra-Violet, Dual Infra-red)
Highest immunity to false sources
(for indoor or outdoor areas)

IR Rear Facing Flame Detector

(Single Infra-red)
Specialist applications
(for enclosed and dark areas)

Triple IR (IR³) Flame Detectors

These detectors have high immunity to false alarms. They are sensitive to flickering, low frequency (1 to 15Hz) infra-red (IR) radiation emitted by flames during combustion. They will continue to function under the most difficult of conditions, even if the lens is contaminated by a layer of oil, dust, water, vapour or ice. The detector has three infra-red (IR) sensors which respond to different infra-red (IR) wavelengths in order to discriminate between flames and spurious sources of radiation. They are ideal for indoor or outdoor applications.

IR³ Flame Detector (Part No. 16589)

- Die cast zinc alloy housing
- Excellent optical interference immunity
- SIL 2 certified

IR³ Flame Detector - Intrinsically Safe (IS) (Part No. 16579)

- Die cast zinc alloy housing
- Excellent optical interference immunity
- SIL 2 certified

IR³ Flame Detector - Flameproof (Exd) (Part No. 16519)

- Copper free aluminium alloy housing
- Excellent interference immunity
- SIL 2 certified
